

20 JAN 1959

Chief, Space, Maintenance & Facilities Branch,
Office of Logistics

Deputy Director of Security (PPS), Office of
Security

Security Construction - Curie Hall

REF. : Memorandum dated 16 October 1957 from C/NSD to C/PhysD, subject:
Security Specifications - Wings A, B, and C - Curie Hall

1. The security storage problems referred to in the attached memorandum have been surveyed by [redacted] Survey Branch, Physical Security Division, OS; in the company of [redacted] Chief, Machine Records Division, Office of the Comptroller; and [redacted] of your office.

2. The specific security construction items, noted on the attached floor plans by Mr. [redacted] have been reviewed by [redacted] CIA Safety Officer, OS. He has advised that the GSA Fire Marshal disapproves of the proposal that a door be installed in the fire wall between the 1200 Wing of Curie Hall and Room 121. He also requests that an emergency exit door equipped with bar and bracket locking mechanism be installed in the left outside wall of the 1200 Wing, immediately to the front of the secure area. (Notations on attached floor plan.)

3. In addition to the items noted on the attached floor plans and those suggested by [redacted] it is requested that the following security construction items also be included.

a. Install expanded metal on entrance door to 1000 Wing. Secure to door with carriage bolts; peen bolt ends.

b. Install expanded metal window grilles on windows in Rooms 1102, 1104, and 1106.

c. Install expanded metal on door leading from corridor into Room 123; secure metal to door with carriage bolts and peen bolt ends.

d. In view of the nature of the material contained in these Wings, it is recommended that a rate-of-rise fire detection system be installed. It is noted that in order to

SUBJECT: Security Construction - Curie Hall

attain fire protection for the Wings involved in this request, it is necessary to install the rate-of-rise system in the entire west portion of the building.

4. It is requested that the Survey Branch, extension be notified upon completion of the above construction. Final survey and arrangements for the installation of MF type combination locks with escape mechanisms on the entrance doors of the respective areas will be made at that time.
